

Our Past Achievements

Built through innovation, teamwork, and determination

Metal Mech began its FIRST LEGO League journey during the 2024-2025 **MASTERPIECE™** season. As a new team, we embraced every challenge with enthusiasm and determination, earning the **Core Values Award** at the regional competition.

The following season, we competed in **SUBMERGEDSM**. At the regional competition, we won the **1st Place Robot Performance Award** and the **2nd Place Core Values Award**, qualifying for the national competition. At nationals, we earned the **3rd Place Champions Award**, securing our place at the **Asia Pacific Open Championship** in Sydney, Australia. Competing internationally was a major milestone for our team, where we proudly received the **Motivate Award**.

- First Lego League -

This season, we competed in **UNEARTHED™**. At the regional competition, we won the **1st Place Robot Performance Award** and the **1st Place Champions Award**, advancing to the national competition. At nationals, we received the **3rd Place Robot Performance Award** and the **2nd Place Champions Award**, qualifying for the **FIRST Championship – World Festival** in Houston, USA. Although we were unable to attend due to unforeseen circumstances, we were later invited to compete at the **FIRST LEGO League Asia Open Championship** in Beijing, China, where we will proudly represent our team this summer.

Nationals CHAMPIONS Award (3rd Place) :

Australia Judges MOTIVATE Award (1st Place) :

Regionals CHAMPIONS Award (1st Place) :

Nationals CHAMPIONSHIP AWARD (2nd Place) - Qualifying to HOUSTON :

- CODEAVOUR -

Metal Mech has also participated in **Codeavour**, an international AI and coding competition. At the Dubai regional competition, our team was awarded **1st place**, and we earned the opportunity to represent the UAE at the international competition in Doha, Qatar.

Competing against talented teams from around the world was an unforgettable experience that encouraged the use of creativity, technical skills, and problem-solving abilities on a global stage. Our hard work and dedication were recognised with the **Judges' Special Award**.

Regionals CHAMPIONS Award (2nd Place) :

Nationals CHAMPIONS Award (1st Place) - Qualifying to QATAR :

Internationals JUDGES Award (2nd Place) :

- GLOBAL INNOVATION CHALLENGE -

Metal Mech also participated in the Global Innovation Challenge (GIC), where we presented our innovation project to judges alongside other GEMS schools across the UAE. This competition gave us the opportunity to explain our problem, solution, research, and the impact of our archoid system in a more professional setting.

Through this experience, we were able to share how our project uses robotics and technology to support archaeologists in dangerous field environments. Presenting at GIC helped us improve our confidence, communication, and ability to explain our innovation clearly to a wider audience. Our hard work and dedication were recognized when we won the **2nd place medal out of all GEMS schools in the UAE**, making this a meaningful achievement in our season journey.

Presenting our Robotic Solution to Experts :

Competing against all Gems Schools in UAE :

- GLOBAL YOUTH ARTIFICIAL INTELLIGENCE -

Metal Mech also participated in the **Global Youth Artificial Intelligence Competition**, hosted by the **Enjoy AI Global Organization Committee**. The competition brought together students and teams from across the UAE, giving us the opportunity to present our ideas, apply our technical skills, and demonstrate our understanding of artificial intelligence and innovation.

Taking part in this competition helped us strengthen our creativity, problem-solving, and presentation skills in a competitive environment. It also allowed us to see how other students across the UAE approached AI-based challenges and used technology to solve problems. Our effort and dedication were recognized when we received the **Runner-Up award**, making this another important achievement in our team's innovation journey.

National RUNNER UP Award (2nd Place) :

- NASA INTERNATIONAL SPACE APP CHALLENGE -

Metal Mech also participated in the **NASA International Space Apps Challenge**, an international competition focused on using creativity, technology, and problem-solving to address challenges related to Earth and space. This gave us the opportunity to think beyond robotics competitions and apply our innovation skills to real-world scientific and global problems.

Through this experience, we explored how technology can be used to understand and solve challenges connected to space, the environment, and life on Earth. Participating in this competition helped us strengthen our research, teamwork, creativity, and problem-solving skills. Our effort was recognized with the **Galactic Problem Solver** certificate, making this another meaningful part of our team's STEM journey.

Participation Certificate :

- STEM CHAMPIONSHIPS -

Metal Mech also participated in the **STEM Championships**, Held by Edustream, where we had the opportunity to compete, present our work, and demonstrate our skills in robotics, innovation, and problem-solving. At the **Regional competition**, our team achieved **3rd place**, which motivated us to continue improving and preparing for the next stage.

At the **National competition**, our hard work and dedication were recognized when we achieved **1st place**. This was a major milestone for our team because it showed how much progress we had made from regionals to nationals. Our performance also allowed us to **qualify for the international competition**, giving us the opportunity to represent our team at a higher level and continue sharing our STEM journey beyond the UAE.

Nationals CHAMPIONS Award (1st Place) - Qualifying for London :

Regionals RUNNER UP Award (2nd Place) :

Working on the Robot and Technology :

- PROMOTING STEM FROM THE UAE -

Through our competitions, outreach, presentations, and international interactions, We promoted STEM from the UAE. Our work showed how students can use robotics, engineering, coding, and research to develop solutions connected to real-world challenges.

This was an important part of our season because we were representing more than our own team. We were also representing GIS and the UAE in an inter-school STEM environment. By sharing our work, we showed how student innovation from the UAE can contribute to global conversations in robotics and problem-solving.

Guiding Others in the Competiton :
